In the above figure. suppose numItems is numRows * numCols, generate a random integer in [0, numItems). Save it in chosen.

Your answer

Suppose integer 2 -- in highlighted label -- is chosen by the above statement, how to find out is row index and column index in the two-dimensional array?

Your answer

How to guarantee a chosen value is not chosen again?

Your answer

Suppose the two-dimensional array is called panel. Write a statement to swap the element whose highlighted integer is (numItems -1), that is, the current last element, with the element whose highlighted integer is chosen.

Your answer

What is the value of 100 / 10?

Your answer

Write an expression to extract the tens digit of a two-digit integer. That is, an integer in [0, 99]. For example, get 9 from 92.
